

Feature 1 Recovery and Reconstruction from the Great East Japan Earthquake through Science and Technology 1

- 1 The Current Situation of Recovery and Reconstruction from the Great East Japan Earthquake and the Efforts of the Japanese Government 1
- 2 Examples of Efforts toward Recovery and Reconstruction through Science and Technology 6

Feature 2 Science and Technology Development toward the Tokyo Olympic and Paralympic Games in 2020 19

- 1 The Society Japan Aims to Realize by 2020: Roles Played by Science and Technology 21
- 2 Projects That Will Expand Frontiers and Yield Results when the Olympic and Paralympic Games are Held in 2020 34
- 3 Science and Technology That Support Athletes 37
- 4 Japan's Choice for the Future 39

Part I Building a Human Resources System That Maximizes Potential: Towards Making Japan "the Most Innovation-friendly Country in the World"

Introduction 44

Chapter 1 Basic Direction in Human Resource Development 45

Section 1 Socioeconomic Changes and Science, Technology and Innovation Activities 47

- 1 Demographic Aging with a Declining Birthrate, and the Maturation of Society 47
- 2 Progress in globalization 47
- 3 Progress in Our Knowledge-based Society 48

Section 2 The Current Situation Regarding Human Resources in Science, Technology and Innovation 50

- 1 Overall Situation (Number and Age Breakdown of Researchers) 51
 - (1) The number of researchers 51
 - (2) The number of doctoral degrees awarded 51
 - (3) Postdoc and other 53
 - (4) Age breakdown of researchers at universities and public research institutions 54
 - (5) Independent situations of researchers at universities and public research institutions 56
- 2 Mobility of Researchers 56
 - (1) Mobility under the current employment system 56
 - (2) Mobility within the country 59
 - (3) Global mobility 62
 - (4) Mobility of human resources across research areas 65
- 3 Career Paths for Young Researchers 66
 - (1) Career Paths for doctoral graduates 66
 - (2) Career Paths for postdocs 67

| | |
|---|-----------|
| (3) Current situation regarding the employment of doctoral graduates by private companies | 68 |
| (4) Employment situation regarding young researchers | 70 |
| (5) Doctoral students in Japan | 75 |
| 4 Opportunities for Diverse Human Resources | 77 |
| (1) Female researchers in Japan | 77 |
| (2) Foreign researchers in Japan | 78 |
| (3) Research administrators in Japan | 79 |
| 5 Current Situation and Issues Regarding Human Resources in Science, Technology and Innovation | 81 |
| (1) Summary of the current situation regarding human resources in science, technology and innovation | 81 |
| (2) Future issues | 83 |
| Section 3 The Desired Human Resource System | 85 |
| 1 Reform of the Human Resource System | 85 |
| (1) Building a system of highly mobile human resources | 85 |
| (2) Improvement of the research environment so that diverse human resources can play active roles | 86 |
| (3) Building platforms for the co-creation of new knowledge and value | 86 |
| 2 Initiatives toward the Promotion of Fair and Honest Research Activities | 88 |
| (1) On research misconduct | 88 |
| (2) Approaches toward the promotion of honest research | 88 |
| Chapter 2 Efforts and a Future Direction toward Securing Human Resources for Science, Technology and Innovation and Promoting Their Activities | 90 |
| Section 1 The establishment of a human resources system that affords high mobility: eliminating the “intergenerational gap in mobility” | 90 |
| 1 A Strategy for Improving the Mobility of All Researchers | 90 |
| (1) Promoting mobility of researchers by improving research environments | 91 |
| (2) Incentives for promoting mobility improvements of researchers | 94 |
| (3) Construction of a Sustainable System | 95 |
| (4) Efforts of universities and incorporated administrative agencies toward mobility improvements of researchers | 96 |
| 2 The Promotion of Active Participation by Doctoral Degree Holders in Various Arenas of Society | 97 |
| (1) Reform of doctoral education | 97 |
| (2) The promotion of active participation in private companies | 100 |
| (3) Diversification of career paths | 105 |
| 3 A New System That Contributes to the Promotion of Mobility and Career Paths of Researchers | 107 |
| Section 2 Improvement of Environments for Increasing Opportunities for Diverse Human Resources to Play Active Roles | 110 |
| 1 Improvement of Environments toward Helping Female Researchers to Become More Active | 110 |
| (1) Current situation regarding female researchers, and issues that need to be addressed | 111 |
| (2) Situation regarding female students | 120 |
| (3) Future directions of efforts | 124 |
| (4) Specific projects | 125 |
| (5) Future efforts that are hoped for | 131 |

| | | |
|-----------|--|-----|
| 2 | Improvement of Research Environments for Young Researchers | 135 |
| (1) | Encouraging young researchers to autonomously and actively play roles | 136 |
| (2) | Fostering scientists who play active roles globally | 150 |
| 3 | Improvement of Working Conditions for International Researchers | 156 |
| (1) | International researchers at universities and research institutions | 156 |
| (2) | Importance of international researchers | 160 |
| (3) | Perceptions held by international researchers | 161 |
| (4) | Future directions of efforts | 166 |
| (5) | Specific projects | 167 |
| 4 | Increasing Research Support Personnel | 173 |
| (1) | Present circumstances of research administrators in Japan | 173 |
| (2) | Clarifying the skills of research administrators | 179 |
| (3) | Toward the establishment of career paths for research administrators | 182 |
| Section 3 | Building platform for the co-creation of new knowledge and value | 184 |
| 1 | The Importance of a Platform for Co-creation | 184 |
| (1) | Changes in the creation of knowledge and value | 184 |
| (2) | The concept of platforms for co-creation | 184 |
| (3) | Human resources required for platforms for co-creation | 185 |
| 2 | Approaches to Building Platforms for Co-creation | 185 |
| 3 | Utilization of Research and Development (R&D) Institutions as Platforms for Co-creation | 192 |
| | Conclusion: Toward Making Japan into “the Most Innovation-friendly Country in the World” | 194 |

Part II Measures Implemented to Promote Science and Technology

| | | |
|------------------|---|-----|
| Chapter 1 | Development of Science and Technology Policy | 197 |
| Section 1 | The Science and Technology Basic Plan | 197 |
| Section 2 | Council for Science and Technology Policy | 199 |
| 1 | Major Efforts of the CSTP, FY2013 | 201 |
| 2 | Strategic Prioritization in Science and Technology -related Budget | 201 |
| 3 | Comprehensive Promotion of Science and Technology Policies | 203 |
| 4 | Major Points Deliberated by the Expert Panels | 204 |
| Section 3 | The Comprehensive Strategy on Science, Technology and Innovation | 206 |
| Section 4 | Administrative Structure and Budget for Science and Technology Policies | 207 |
| 1 | Administrative Structure for Science and Technology Policies | 207 |
| 2 | Science and Technology-related Budgets | 212 |
| Chapter 2 | Realization of Sustainable Growth and Societal Development into the Future | 214 |
| Section 1 | Realization of Restoration and Recovery from the Earthquake Disaster | 214 |
| 1 | Promotion of Measures to Accomplish the Most Important Issues | 214 |
| 2 | System Reform for Restoration and Recovery from Earthquake Disaster | 223 |
| Section 2 | Promotion of Green Innovation | 224 |
| 1 | Promoting Measures to Accomplish the Important Issues | 225 |
| 2 | System Reforms for Promotion of Green Innovation | 241 |
| Section 3 | Promotion of Life Innovation | 247 |
| 1 | Promotion of Measures to Accomplish Critical Issues | 247 |
| 2 | System Reform for Life Innovation Promotion | 254 |
| Section 4 | System Reform toward Promotion of Science, Technology and Innovation | 260 |
| 1 | System Reform toward Promotion of Science, Technology and Innovation | 260 |
| 2 | Construction of a New System for Science, Technology and Innovation | 270 |
| Chapter 3 | Response to Critical Issues Facing Japan | 279 |
| Section 1 | Promotion of Measures for Solving Critical Issues | 279 |
| 1 | Assuring Safety, Affluence and High Quality of Life | 279 |
| 2 | The strengthening of Japan's Industrial Competitiveness | 289 |
| 3 | Contributions to Solutions to Global Issues | 294 |
| 4 | Foundations of the State | 298 |
| 5 | Improvement and Enhancement of Common Science and Technology Infrastructure | 309 |
| Section 2 | System Reforms toward Solution-oriented R&D | 316 |
| 1 | System Reforms for Promoting Solution-oriented R&D | 316 |
| 2 | The Establishment of Systems for Promoting R&D That Should be Led by the Government | 316 |
| Section 3 | Strategic Development of Global Activities in an International Context | 316 |

| | | |
|--|--|------------|
| 1 | Promotion of R&D Toward Solutions to Common Issues in Asia | 317 |
| 2 | New Developments in Science and Technology Diplomacy | 317 |
| Chapter 4 Enhancement of Basic Research and Human Resources Development | | 332 |
| Section 1 | Radical Enhancement of Basic Research | 332 |
| 1 | Enhancement of Diverse and Creative Basic Research | 332 |
| 2 | Enhancement of Research Capacity at Universities; Creation of the World's Most Advanced Research Centers | 335 |
| Section 2 | Development of Human Resources capable of Active Roles in Science and Technology Research | 337 |
| 1 | Development of Human Resources Capable of leadership in Diverse Fields | 337 |
| 2 | Development of Top level, Creative Researchers | 340 |
| 3 | Development of Leading Science and Technology Human Resources of the Next Generation | 342 |
| Section 3 | Establishment of a World-Class Research Environment and Infrastructure | 347 |
| 1 | Improvement of R&D Environments at Universities and Public Research Institutions | 347 |
| 2 | Enhancement of Intellectual Infrastructure | 350 |
| 3 | Enhancement of Research Information Infrastructure | 352 |
| Chapter 5 Development and Promotion of Policy in Collaboration with Society | | 355 |
| Section 1 | Deepening Relations between Society and Science, Technology and Innovation | 355 |
| 1 | Promotion of Science, Technology and Innovation Policies from the Public Viewpoint | 355 |
| 2 | Promotion of Science, Technology and Innovation Communication Activities | 358 |
| Section 2 | Promotion of Effective Science, Technology and Innovation policies | 360 |
| 1 | Strengthening of Planning and Promotion of Policies | 360 |
| 2 | Enhancement of Assessment and Allocation Functions in the Research-fund Systems | 362 |
| 3 | Enhancement of R&D Implementation Systems | 368 |
| 4 | Establishment of the PDCA Cycle in Science, Technology and Innovation Policy | 369 |
| Section 3 | Expansion of Research and Development Investment | 370 |

List of Figures and Tables

Feature

| | | |
|-----------|--|----|
| Figure 1 | Boarding Gate with a Built-in Explosives-Detection Apparatus | 24 |
| Figure 2 | Driving Support Technology | 25 |
| Figure 3 | “Ultra Compact Means of Mobility” or Ultra Compact Car | 25 |
| Figure 4 | HAL | 26 |
| Figure 5 | A beautiful Prosthetic Leg that Goes Beyond Compensating for a Lost Body Part | 27 |
| Figure 6 | Outdoor AR system | 28 |
| Figure 7 | “Omotenashi” Robots | 28 |
| Figure 8 | Holograms in the City, Watching Sports in the City | 29 |
| Figure 9 | Changes in the National Share of Total Computing Power of The Top 500 Supercomputers, Broken Down by Country | 36 |
| Figure 10 | Nanomachine for Transmitting Internal Information | 40 |

Part I

Table of Contents

| | | |
|-----------|---|-----|
| Feature-1 | Efforts toward the Creation of “a New Tohoku region” | 5 |
| Feature-2 | Dream Superexpress: A driving force behind worldwide “railway rehabilitation” | 20 |
| Feature-3 | Japan Vision 2020 | 30 |
| Feature-4 | Vision of Cutting-Edge Medical Care and Healthcare in the Future | 32 |
| Feature-5 | Achievements expected for the post-K supercomputer, a successor to the K computer | 36 |
| 1-1 | One Result from the Funding Program for World-Leading Innovative R&D (FIRST) -The Development of a Next-generation Mass Spectrometry System, and Contribution to Drug Discovery and Diagnostics- | 46 |
| 1-2 | One Result from the Funding Program for World-Leading Innovative R&D (FIRST) -New Superconductivity, Investigation for Related Functional Substances, and Application of Industrial Superconducting Wire- | 49 |
| 1-3 | One Result from the Funding Program for World-Leading Innovative R&D (FIRST) - Innovations in Diagnosis and Therapy Led by Nanobiotechnology - | 66 |
| 1-4 | One Result from the Funding Program for World-Leading Innovative R&D (FIRST) - Development of a Real-time Tumor-tracking Proton Beam Therapy System for Enabling Sustainable Advancement of Therapies - | 81 |
| 1-5 | One Result from the Funding Program for World-Leading Innovative R&D (FIRST) - Development of Photonics-Electronics Convergent System Technology - | 84 |
| 1-6 | Mobility of Researchers in the USA | 108 |
| 1-7 | Mobility Status of Researchers in Europe | 109 |
| 1-8 | Efforts for Supporting Women’s Active Roles in the STEM Disciplines in the USA. | 135 |
| 1-9 | Skills Required of Postdocs in the USA | 146 |
| 1-10 | Career Development Awards for Young Researchers: K Awards | 150 |
| 1-11 | Programs Implemented by the National Institute for Materials Science (NIMS) | 172 |
| 2-1 | Portable Mass Spectrometer for the Detection of Illegal Drugs | 286 |
| 2-2 | The World’s Lightest, Thinnest, Flexible Organic Light-Emitting Diodes (OLEDs) | 333 |
| 2-3 | Creation of Functional Materials Based on Inter-Element-Fusion Strategy | 334 |
| 2-4 | Development of a disaster victim directory system that supports prompt relief of disaster victims | 357 |

The maps in this white paper do not necessarily indicate Japanese territories in their entirety.
